### H.P. 2908 Rhoeo Discolor

Also known as Moses  
in the Bulrushes

Ladies, here is something new and outstanding. The only one of its kind in existence. Produces large broad palm-like attractive stems or leaves about 1½ inch wide and 8 to 10 in. long, grooved down the center, 7 to 8 to a plant with continuous growth. Leaves are deep green on the upper side and underneath a rich purple. With this combination of color when the sun shines on it, it is very fascinating. As the new leaves begin to form from the crown they shoot forth very fine white flowers which are open in the morning and close at the end of the day. As the leaf develops the small white flowers drop off. Quite unusual. Easy to grow as a House Plant during the winter months and a fine ornamental pot plant for your porches in the summer. We are sure you will want some of these in your House Plant collection this winter. Each \$1.10—2 for \$2.00.

# This Year Start Your Garden Early<sup>11</sup>

"Preparing Soil for the Seed Box."

Use any good garden soil free from weeds; put in a little fertilizer, thoroughly mixing together, and screen into seed box as pictured above. Press the soil down firm and smooth with small flat piece of board. This will give you a fine fertile seed bed.

"Sowing the Seed."

Simply scatter the seed thinly over surface of soil as pictured above. When these seedlings come up this method requires transplanting them at uniform distance in another flat to grow larger before setting in the garden or field. It's a little more work this way but you always get better and more stockier plants.

"Another Method of Sowing the Seed."

After firming soil take your marking stick and draw straight furrows across the top and sow seed at a uniform distance as pictured. If this method is followed you may let them grow full size before setting in the garden or field. In other words, it's only one transplanting.

### Grow Your Own Vegetable and Flower Plants

**It's Easy and Lots of fun. It Will Extend your Garden Pleasure from Feb. to Late Fall.**

A 15c Packet of Seed will Produce More Plants than you could buy for \$10.00

When you raise your own plants you are always sure of getting just the varieties you want; besides it's worth a great deal to have the plants growing in boxes in your own home so you can set them out right before or after a shower. You can't have this privilege unless you raise your own.

The illustrations here will give you a complete idea how to prepare the soil, plant the seed, transplant the seedlings and reset in the garden or field. Grow your own Tomato Plants and any other early vegetables you desire.

### BE SURE TO

buy Condon's Superior seed and raise your own plants of the following universal favorites in Annual Blooming Flowers:

Asters, Snapdragon, Marigold, Petunia, Pansy, Verbena, Salvia & Zinnia.

Don't forget Hardy Perennial Flower Seed. If sown this spring will make marvelous plants to carry over next winter to give your garden a profusion of bloom the following spring, and several seasons thereafter.

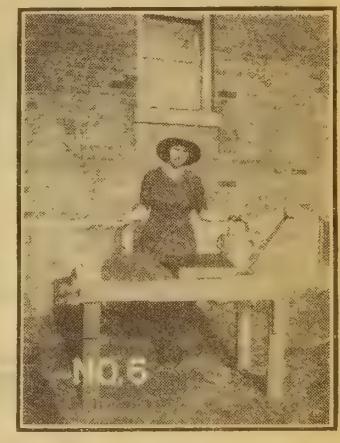

If you need further advice feel free to write us. Yours sincerely,

"Transplanting Seedlings to Permanent Box."

Prepare soil as outlined in photographs Nos. 1 and 3 and set your plants about 4 inches apart each way. Keep in sunny exposure and expose to cool air gradually to instill a hardy growth.

"Seedlings Are Now Up Ready to Transplant."

See photograph No. 7 for proper method of transplanting. If suggestions given here are carefully followed, good seed and good soil used, your garden will be a success and you will derive much pleasure and profit from it.

"Covering the Seed."

After sowing seed as pictured in photographs 2 and 3, take your screen again and screen over the top of seed some nice fine soil, covering seed with soil  $\frac{1}{4}$  to  $\frac{1}{2}$  inch deep, according to size of seed. Press top of soil down firmly again.

"Getting Seed to Start Quickly."

We now cover top of box with a damp burlap bag which gives a uniform moisture and as the sprouts begin to show remove the bag and place a pane of common window glass over it. Place in sunny exposure and partly remove glass from box every day to harden the seedlings.

**The Most Satisfactory Variety Ever Introduced**

This is the earliest of all varieties we have ever seen. It makes a firm, solid head 6 to 9 inches in diameter in about 55 days after sowing. Even under unfavorable conditions it will head up well, heads forming all at one time, showing a uniformity of size, shape, and type. The plants make a compact dwarf growth. The head is almost round. Has a beautiful pure white, smooth curd. Dry weather does not materially check its growth and therefore is able to resist diseases. Pkt. 40c;  $\frac{1}{4}$  oz. \$1.10;  $\frac{1}{2}$  oz. \$2.00; oz. \$3.50;  $\frac{1}{4}$  lb. \$10.00;  $\frac{1}{2}$  lb. \$18.00; 1 lb. \$32.00.

**308 Dry Weather or Danish Giant**

Though Cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure. It is of the highest quality, producing large, pure white heads, maturing a little later than Early Snowball. The heads are considerably larger than those of that famous variety. Individual heads weigh 2 lbs. each. Pkt. 30c;  $\frac{1}{4}$  oz. 90c;  $\frac{1}{2}$  oz. \$1.60; oz. \$2.75;  $\frac{1}{4}$  lb. \$8.00;  $\frac{1}{2}$  lb. \$15.00; 1 lb. \$28.00.

**307 True Early Snowball**

Splendid for forcing in the greenhouse and frames or outdoor culture. Brings a good price in the early market and stands shipping very well. Plants are dwarf; heads grow 6 in. and more in diameter and have a smooth, compact curd. They weigh about  $1\frac{1}{4}$  lbs. each and often more if grown under favorable conditions. One of the best known. The seed we offer you is of the highest possible quality. Pkt. 30c;  $\frac{1}{4}$  oz. 90c;  $\frac{1}{2}$  oz. \$1.60; oz. \$2.75;  $\frac{1}{4}$  lb. \$8.00;  $\frac{1}{2}$  lb. \$15.00; 1 lb. \$28.00.

**Celery****319 CORNELL No. 19**

New Outstanding Variety for Home and Market

Highly resistant to Fusarium Yellows. Averages 9 inches to joint with an overall height of 24 to 25 inches. Hearts are long and comparatively full. Stems thick, rounded and smooth. Pkt. 30c;  $\frac{1}{2}$  oz. 75c; oz. \$1.25;  $\frac{1}{4}$  lb. \$3.75;  $\frac{1}{2}$  lb. \$7.00; 1 lb. \$13.00.

Stalks medium thick. Branches very readily. Pkt. 25c;  $\frac{1}{2}$  oz. 65c; oz. \$1.10;  $\frac{1}{4}$  lb. \$3.00;  $\frac{1}{2}$  lb. \$5.00; 1 lb. \$9.00.

**318 Summer Pascal** "New Green Variety" A new early, blight resistant, green celery of the finest quality. Stalks are long, solid, crisp, stringless and of excellent flavor. One of the most popular green varieties used without blanching. Plants are sturdy and robust. Recommended for home and nearby markets, but is too tender and brittle to stand long distance shipping. Pkt. 25c;  $\frac{1}{2}$  oz. 65c; oz. \$1.10;  $\frac{1}{4}$  lb. \$3.00;  $\frac{1}{2}$  lb. \$5.00; 1 lb. \$9.00.

**315 Giant Pascal**

Considered by many the standard winter Celery. The plants are productive, with tall, upright leaves of a rich dark green color. The stalks are tall and thick. They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. It will keep in perfect condition throughout the winter months. Pkt. 20c;  $\frac{1}{2}$  oz. 55c; oz. 90c;  $\frac{1}{4}$  lb. \$2.50;  $\frac{1}{2}$  lb. \$4.50; 1 lb. \$8.00.

I have raised lots of Muskmelon in the past, but this melon takes the head of the class.

Yours very truly, C. G. BATHE.

### 522 White Mushroom Spawn

Mushroom beds may be made in a warm, dry cellar or in any building where the frost does not penetrate, and in the open air during the summer and fall months. Having procured the spawn, the next thing to be attended to is to make preparations for the beds. About a fortnight or three weeks before the beds are to be made collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to complete easily-understood directions which we send free with each order. One brick will spawn a bed 10 feet by 10 feet.

In shape, MATCHLESS TOMATO is smooth, well-formed and extremely deep from stem to blossom, making it unusually heavy. It ripens evenly to the stem and is without ridge or cracks; it has great meatiness and few seeds. It is firm without being hard, unrivaled home and market tomato. The vines are vigorous but compact. The joints are short and it always fruits in large clusters at every second joint, which accounts for its wonderful productiveness. Matchless Tomato is the heaviest for its size of any variety and, on account of its brilliant red color, depth and solidity, is one of the handsomest tomatoes. Its beautiful appearance and color make it sell ahead of all sorts, and its unusual solidity, few seeds and desirable form for rapid peeling without waste, make it a most desirable canning and slicing variety. It costs you no more, takes no more time to grow than the best than it does to grow the more common sorts and we think you will find Matchless Tomato one of the Grandest Tomatoes you have ever grown. ### 1111 NEW HARDY AMARYLLIS

Hallii *Lycoris Squamigera* AMAZING SURPRISE LILY

This amazing bulb produces attractive green foliage in the spring. The foliage then dies down. In

August, the flower stalks shoot up 2 feet tall with large lily-shaped flowers, a lovely orchid-pink. There are often 8 to 12 flowers on a single stem. When cut, they will last a week. Perfectly hardy here but we do not advise planting in cold states like Minnesota, Dakotas, etc. Plant so the bulb is covered with 4 to 5 inches of soil, in sun or part shade. We recom-

Wasn't sure we were going to have them when part of the Catalog went to press so that is what puts it out of alignment with other bulbs. **BE SURE TO INCLUDE THEM IN YOUR GARDEN THIS SPRING.**

mend a winter mulch to prevent alternate thawing and freezing. Before the spring foliage dies down, put in a small marker so you will know where the bulb is and not hoe it up. The bulb multiplies, so each passing year there are more flowers.

**Large Bulbs (7 to 8 inches around). Each 65c, 2 for \$1.20, 6 for \$3.00.**

## 5 Varieties of Apples on 1 Tree

Here Are The 5 Varieties Of Apples That You May Enjoy Growing On This One Tree: Stayman's Winesap; Double Red Delicious; Dark Red Jonathan; Grimes Golden; Yellow Transparent. Imagine if you can 5 different varieties of the World's Best Apples all growing and producing delicious fruit on one tree.

Everybody—Boys & Girls, Mom & Pop love Apples and now even on a small city lot you may have 5 different varieties on one tree. Really Amazing. This is accomplished by grafting 4 different varieties on one standard tree like Red Delicious.

Plant just the same as you would any fruit tree. Dig a hole twice as large as you need. Fill it with water, putting a little fertilizer in the bottom, then 2 inches of soil, then another pail of water. Set the tree. Get down on your hands and knees, work the soil around the fine fibrous roots. Keep filling in and packing soil with your hands until you have filled the hole within 3 inches of the soil level, leaving this sunken hole about 3 inches deep all around the tree. This will permit the water to seep down into the roots and not run away. Give one or two buckets of water every other day until growth is established.
